AN OVERVIEW OF IRIDIAN

1.1 Word Classes

Traditional Iridian grammar classifies words into three types: **lóihnelý** (verbs), **zesztelý** (nouns), and **múisztelý** (function words)

Part I

Phonology

PHONOLOGY

2.1 Vowels

2.1.1 Oral Vowels

Iridian has seven pairs of corresponding long and short vowels. With the exception of /ɐ aː/ and /u uː/, long vowels are tenser than their short counterparts.

Table 2.1: Vowel inventory of standard Iridian.

	FRONT		BACK
	Unrounded	Rounded	
Close	ɪ iː	ʏ yː	u uː
Mid	ɛ eː	œ øː	ɔ oː
Open			ɐ aː

Phonetic realization is generally consistent with orthography as seen in Table 2.2 below.

Table 2.2: Orthographic representation of vowels.

	Short	Long		Short	Long
/a/	a	á	/u/	u	ú
/e/	e	é	/y/	y, ÿ	ý
/i/	i	í	/ø/	au	áu
/o/	o	ó			

Iridian has an extensive system of consonant allophony. Table 2.4 shows the full range of consonants used in Iridian, with the phonemes in parentheses appearing only as allophones.

Table 2.4: Full consonant inventory of standard Iridian.

	Labial	Alveolar	Postalv.	Palatal	Velar
Plosive	p b	t d		(c ɟ)	k g
Nasal	m (ɱ)	n		(ɲ)	(ŋ)
Liquid		r l		(ʎ)	
Sib. Fric.		s z	ʃ ʒ	(ç ʝ)	
Non-Sib. Fricative	(f) v			(ç)	x (χ)
Sib. Affricate		ts̺ (dz̺)	tʃ̺ (dʒ̺)	(tɕ̺ dʒ̺)	
Non-Sib. Aff.		(t̺θ̺ d̺ð̺)		(c̺ç̺ ʝ̺)	(k̺x̺ ɡ̺)
Lat. Fric.		(θ̺)			
Approximant	(β̺)	(ð̺)		j	(ɰ w)

Absent in both tables is the glottal stop [ʔ] which occurs in only two cases: (1) before an onset vowel, e.g., **avt** [ʔɛft] ‘car’; and (2) between two vowels that do not form a diphthong, e.g., **naomeszá** [nɛʔɔmɛʃɔː], ‘to whisper.’

2.3.1 Phonetic Realization

VOICING

Iridian consonants are generally affected by two systems of phonological opposition: a primary distinction between voice and unvoiced consonants, and a secondary distinction between hard and soft consonants (i.e., normal and palatalized consonants).

Consonant voicing is phonemic. Voiced consonants are called muddy or dark (**mrknie**) while unvoiced consonants are called clear (**hocke**). Iridian has a strong tendency to devoice consonants, a process called **niehockvo** (clearing, lightening).

Voiced consonants are devoiced when followed by a voiceless obstruent, or in word-final position, unless followed by a vowel or a voiced obstruent. Conversely, voiceless obstruents become voiced when followed by another voiced obstruent.

avt	[ʔeft]	‘car’
szkad	[ʃkɐt]	‘serious’
kdavidy	[gdev ⁱ ɪc]	‘clean’
ryz	[ris]	‘rice’

PALATALIZATION

Iridian consonants can either be hard (**suhne**) or soft (**gem**). Consonants are hard by default but become soft when followed by the vowels **i** or **í**. The vowel **y** is normally used to indicate non-palatalizing /i/, although it is used to indicate palatalization word-finally or before **i**.

The use of **-y** is a remnant of word final short **i* from Old Iridian that has since disappeared. The same process has caused the shortening of long **i* to /ɪ/. This sound change did not distinguish between palatalizing and non-palatalizing **i* so that **seni* ‘tooth’ and **seny* ‘blanket’ both merged to modern Iridian **seny** [seɲ].

Softening involves palatal articulation of labial consonants (e.g., **be** [bɐ] vs **bie** [bʲɐ]) or the change to a palatal consonant for non-labials (e.g., **te** [tɐ] vs **tie** [tɕɐ]). Table 2.5 shows how non-labials are affected by palatalization in Iridian.

Table 2.5: Soft and Hard Consonants

SERIES	HARD		SOFT	
	Unvoiced	Voiced	Unvoiced	Voiced
<i>t series</i>	t [t]	d [d]	ty, ti [c]	dy, di [ɟ]
<i>k series</i>	k [k]	g [g]	ky, ki [c]	gy, gi [ɟ]
<i>s series</i>	s [s]	z [z]	sy, si [ç]	zy, zi [ʝ]
<i>sz series</i>	sz [ʃ]	zs [ʒ]	szy, -i [ç]	zsy, -i [ʝ]
<i>c series</i>	c [t͡s]	dz [d͡z]	cy, ci [t͡ɕ]	dzy, -i [d͡ʝ]
<i>cs series</i>	cs [t͡ʃ]	dc [d͡ʒ]	csy, -i [t͡ɕ]	dcy, -i [d͡ʝ]
<i>h series</i>	h [x]	—	hy, hi [ç]	—
<i>n series</i>	—	n [n]	—	ny, ni [ɲ]
<i>l series</i>	—	l [l]	—	ly, li [ɭ]

Note how sounds produced using the same manner of articulation merge to the corresponding palatal consonant, keeping the voiced/voiceless distinction, such that both sibilant pairs **s-z** and **sz-zs** soften to [ç ʝ], the plosive

pairs **k-g** and **t-d** to [c-ɟ], and the affricates **c-dz** and **cs-dc** to [t͡ɕ d͡ʒ].¹ Some dialects, however may realize soft **cs-dc** as [c ɟ].

STOPS

Initial stops are affricated when following a pause, so that the velar pair /k g/ are realized as [k͡x ɡ͡x], the palatal pair /c j/ as [c͡ɕ ɟ͡ɕ] and the dental pair /t d/ as [t͡θ d͡ð] (the last pair is written without the diacritics in the examples). This sound change can be traced to the initial aspirated stops *k^h, *g^h, *t^h and *d^h in Old Iridian weakening to affricates. The labial stops /p b/ are unaffected by this process as most instances of *p^h and *b^h have merged to [b] or [v] in modern Iridian.

gulag	[ˈɡ͡xʊləx]	‘gulag’
kaszt	[k͡xɒʃt]	‘blood’
tom	[t͡θɒm]	‘powder’
dum	[d͡ðʊm]	‘house’
tieho	[t͡ɕɛxɔ]	‘god’
giola	[ˈɟ͡ɕɔlə]	‘marble’

The velar stops /k g/ are lenited to the velar fricatives [x ɣ] intervocalically, before a voiceless stop, after a vocalized l if followed by another vowel or a voiceless stop, or before the nasal consonants /n/ or /m/ if following a vowel immediately. This lenition also occurs word-finally unless followed by a voiced obstruent, in which case, subject to word-final devoicing, they merge to [x].

seg	[sɛx]	‘flower’
jekom	[ˈjɛxɒm]	‘bed’
naga	[nɐɣɐ]	‘farm’
agnoszce	[ˈɣɐɣˈnɔʃt͡sɛ]	‘agnostic’
akta	[ˈɣɛxtɐ]	‘show’
szelk	[ʃɛwx]	‘beginning’

This lenition can also be observed with the voiced stops /b/ and /d/ which become the approximants [β] and [ð̞] (written without the diacritic hereafter) intervocalically or between a vocalized /l/ and another vowel.

nada	[nɐð̞ɐ]	‘box’
lobacs	[lɔβɛt͡ʃ]	‘earthquake’
álba	[ɔːwβɐ]	‘hands’

¹ This merger and word-final devoicing results, for example, to **-ety**, **-edy**, **-eky**, and **-egy** all being pronounced as [ɛc]

NASALS

Iridian has two nasal consonants /m n/ and three further allophones [ɱ ɲ ɳ]. /n/ cannot appear before bilabials and similarly /m/ cannot appear before velars. The labiodental [ɱ] is the allophone of /m/ and /n/ before labiodentals and [ɲ] is the allophone of /n/ before velars. The palatal [ɳ] is an allophone of /n/ in environments affected by **niehockvo**.

niho	[ɲɪxɔ]	‘nothing’
tramvek	[ˈtrẽwɱvɛx]	‘tramway’
sinvoníe	[ɛɪɱvoˈɲiʔɛ]	‘symphony’
bankišt	[ˈbẽwɱɕɪft]	‘banker’

LIQUIDS

Iridian has two liquids: the lateral /l/ and the rhotic /r/.

The rhotic /r/ is almost universally realized as the flap [ɾ] but is nonetheless transcribed as [r]. The palatal [ɻ] occurs as the soft allophone of /l/. Syllable-finally, /l/ is vocalized, becoming [ɫ], or in closed syllables as the glide [w].

lievoutá	[ɬɛˈvoutɐ]	‘to be pregnant’
mielko	[ˈmʲɛwɫɐ]	‘tramway’
niêlc	[ɲẽwɫs]	‘rock, boulder’

FRICATIVES

The voiceless labial fricative /f/ is not a native phoneme in Iridian and occurs only as an allophone of /v/ in environments affected by **niehockvo**. Loanwords containing /f/ are normally assimilated to /v/.

vóto	[ˈvɔtɔ]	‘photograph’
vase	[vɛsɛ]	‘phase’
kávemaszt	[ˈkɔːvɛːmɛʃt]	‘coffeeshop’
Vrânca	[ˈvrẽwɫsɐ]	‘France’

/v/ is realized as the labiodental approximant [ʋ] after an obstruent. The sequence **kv** and **gv** is further lenited to the labialized velar fricatives [x^w ɣ^w]. The voiceless [x^w] (from both **kv** and **hv**) is in free variation with [ɰ], with the latter being the more common pronunciation, especially among younger speakers. For simplicity both [x^w] and [ɰ] will be transcribed as [ɰ].

kvártir	[ˈmaɾcɪɾ]	‘apartment’
dvrápe	[ˈtʰɹɔːpɛ]	‘cloud’
szviêce	[ʃviẽwt͡sɛ]	‘candle, electric light’

Modern Iridian has lost the distinction between /h/ and /x/, with both ⟨ch⟩ and ⟨h⟩,² historically representing [x] and [h], respectively, merging to the velar fricative [x]. This becomes [ç] before voiceless stops word-initially or when following a front vowel, or before the front vowels [i] and [ɪ]. The palatal [ç] is the prepalatal [ç̟], intermediate between /ç/ and /ç̟/. The sequence ⟨hl⟩ is realized as [t͡ɬ].

hluvek	[ˈɬuvɛx]	‘apartment’
hvadiem	[ˈmaɟɛm]	‘mirror’
hrona	[xɾɔːnɐ]	‘three’
hteny	[çtɛɲ]	‘person’
neiht	[nɛɪçt]	‘color’

AFFRICATES

Iridian has two phonemic affricates, /t͡s/ and /t͡ʃ/. Both of them are unvoiced, although the voiced counterparts /d͡z/ and /d͡ʒ/ may occur marginally in loanwords, or more rarely in **niehockvo** environments, where voiceless obstruent become voiced when preceding voiced obstruents. In addition, there are four additional affricates that occur allophonically: /k͡x ɡ͡x/ as allophones of /k ɡ/ and /t͡ɕ d͡ʒ/ as palatalized allophones of /t͡s d͡z/ or /t͡ʃ d͡ʒ/.

ASPIRATION

Iridian consonants are not aspirated.

2.4 Phonotactics

2.4.1 Syllable structure

Ignoring the possible complexity of the onset, nucleus or coda, the basic structure of an Iridian syllable is CV(C), with C representing a consonant and V a vowel. Iridian has relatively few phonotactic constraints, allowing, at a maximum, syllables of the form (C)²CV(C)³. Nevertheless, most syllables fall in either of the four groups CV, CVC, CCV and CVCC

²Most instances of ⟨ch⟩ have been replaced with ⟨h⟩ following various spelling reforms.

Table 2.6: Blevin's criteria as they apply to Iridian.

	PARAMETER
Obligatory onset	Yes
Coda	No
Complex onset	Yes
Complex nucleus	Yes*
Complex coda	Yes
Edge effect	

2.4.2 Onset

Iridian does not allow a null onset (vowel in the syllable onset), i.e., the most basic Iridian syllable should be of the form CV. Words that superficially appear as having a null onset syllable in the initial position are actually preceded by a glottal stop. An epenthetic glottal stop is also added between vowels in a sequence that do not otherwise form diphthongs, or before a vowel in a word-initial position in loanwords.

Americ	[ʔəməˈrɪt͡sɛ]	‘America’
uide	[ʔvðɛ]	‘gong’
ekt	[ʔɛxt]	‘forehead’

The following CC clusters are allowed to be in onset position:

1. Stop followed by a liquid:
 - (a) /pr/: **pragy** [prɛɕ], ‘sand’; **pramou** [prɛˈmou̯], ‘petal’
 - (b) /tr/: **trâ** [trɛ̃w̃], ‘bread’; **truig** [trɪx], ‘ball’
 - (c) /kr/: **krova** [ˈkrɔvɛ], ‘egg’; **kramy** [krɛmʲ], ‘toe’
 - (d) /pl/: **plan** [plɛn], ‘plan’; **ploika**, [ˈplɔxɛ] ‘knot’
 - (e) /tɫ/:³ **tlyk** [tɫɪx], ‘pig’; **tlum** [tɫɔm]
 - (f) /kl/:⁴ **klug** [tɫɔx], ‘foot’; **klúbe** [ˈtɫuːbɛ], ‘club’
 - (g) /br/: **brok** [brɔx], ‘female teenager’; **bremy** [brɛmʲ], ‘ugly’
 - (h) /dr/: **drono** [drɔnɔ], ‘brother’; **drúi** [dryː], ‘enemy’
 - (i) /gr/: **grec** [grɛts], ‘flag’; **gryny** [grɪɲ], ‘peace’
 - (j) /bl/: **bloht** [blɔxt], ‘mud’; **bleu** [blø̃ɲ], ‘neck’
 - (k) /dl/:⁵ **dleva** [ˈtɫɛvɛ], ‘low’; **dlouhe** [tɫɔuxɛ] ‘duck’

³This is realized as [tɫ] or even [tʃ].

⁴Realized as [tɫ] in Standard Iridian or as [kl] in some dialects.

⁵This has merged to **tl** in Standard Iridian.

Table 2.7: Allowed word-initial CC clusters

+ allowed cluster

(l) /gl/: **gloibek** [ˈgløbɛx]2. Dental or velar stops followed by /v/: ⁶

(a) /tv/:

(b) /dv/:

(c) /kv/: **kvártir** [ˈkvɔrtɪr], apartment; **kveno** [ˈkvɛno], ‘kitten’(d) /gv/: **gvarusz** [ɣʷɐˈruʃ], ‘speech’; **gvecs** [ɣʷɛtʃ], ‘dinner’

3. /k/ or /p/ followed by /t/ or its soft counterpart; /k/ followed by /d/ or its soft counterpart:

(a) /kt/: **kto** [kto], ‘smile’; **ktiesz** [kɛʃ], ‘ache’(b) /pt/: **pteva** [ptɛvɐ], ‘leaf’; **ptiará** [ptɛrɐ], ‘count’(c) /kd/:⁷

4. /k/ or /p/ before /s/ or /ʃ/ or their soft counterparts:

⁶/v/ is realized as /ʋ/ in this context. See section of stops for details on **kv** and **gv**.⁷This is always realized as [gd].

- (a) /ps/:⁸ **psychologa** [psixɔlɔ'ɣɐ], 'psychologist';
- (b) /pʃ/: **pszehuj** ['pʃɛxuɪ], 'annoyance'; **pszêcem** ['pʃɛ̃wtɕɐm], 'grain'
- (c) /ks/:⁹
- (d) /kʃ/: **kszêtvá** ['kʃɛ̃wtvɐ], 'chain'; **kszévet** ['kʃɛ:vɛt], 'basket'
- 5. Dental stops followed by /m/:
 - (a) /tm/: **tmeny** [tmɛɲ], 'belt'; **tmou** [tmou], 'waist'
 - (b) /dm/:
- 6. /p/, /d/, /k/ or /g/ followed by /n/:
 - (a) /pn/:
 - (b) /dn/:
 - (c) /kn/:
 - (d) /gn/:¹⁰ **gnasz** [knɛʃ], 'school'; **gnuma** [knɔmɐ], 'mattress'
- 7. /m/ followed by /n/ or /n/ followed by /l/:
 - (a) /mn/: **mnucs** [mnɔtʃ], 'husband'; **mnouvaty** ['mnoʊvɛt], 'hunch-back'
 - (b) /nl/:¹¹ **nlâsz** [nlɛ̃wʃ], 'castle'; **nlúi** [nlɥ:], 'horse'
- 8. /ʃ/ followed by a voiceless stop:
 - (a) /ʃp/:
 - (b) /ʃt/
 - (c) /ʃk/:
- 9. /z/ before /b/ or /d/:
 - (a) /zb/
 - (b) /zd/:
- 10. /ʃ/ or /z/ followed by a nasal, a liquid, or /v/:
 - (a) /ʃm/:
 - (b) /ʃn/:
 - (c) /ʃr/:
 - (d) /ʃl/:
 - (e) /ʃv/:
 - (f) /zm/:
 - (g) /zn/:
 - (h) /zr/:
 - (i) /zl/:
 - (j) /zv/:
- 11. /ʃ/ before the affricates /ts/ or /tʃ/:

⁸This is a marginal cluster, occurring only in mostly Greek loanwords.

⁹This is another marginal cluster, occurring only in mostly Greek loanwords.

¹⁰Realized as [ɲn] after a vowel-final word and [kn] elsewhere.

¹¹This is realized as palatal [ɲɕ].

- (a) /ʃts/:
- (b) /ʃtʃ/
- 12. /ʃ/ or /s/ before the affricates /x/:
 - (a) /ʃx/:
 - (b) /sx/
- 13. /v/ before the affricates /s/ or /ʃ/, /n/, the stops /t/, /k/, or /d/, the liquids /r/ or /l/, or the affricate /ts/:
 - (a) /vs/:
 - (b) /vʃ/:
 - (c) /vn/:
 - (d) /vt/:
 - (e) /vk/:
 - (f) /vd/:
 - (g) /vr/:
 - (h) /vl/:
 - (i) /vts/:
- 14. /tʃ/ before /k/, /t/, or /l/:¹²
 - (a) /tʃk/:
 - (b) /tʃt/:
 - (c) /tʃl/:
- 15. /ts/ before /k/, /t/, /l/, /r/ /n/ or /x/:
 - (a) /tsk/:
 - (b) /tst/:
 - (c) /tsr/:
 - (d) /tsl/:
 - (e) /tsn/:
 - (f) /tsx/:
- 16. /x/ before /t/, /l/, /r/ or /v/:
 - (a) /xt/:
 - (b) /xl/:
 - (c) /xr/:
 - (d) /xv/:¹³

Three-consonant clusters are subject to more constraints.

- 1. /ʃ/-voiceless stop-liquid clusters
 - (a) /ʃpr/:

¹²CC clusters beginning with [tʃ] have all simplified to [ʃ].

¹³This is realized as [ʌ].

Table 2.8: Allowed CCC clusters.

2.4.3 Nucleus

2.4.4 Coda

2.5 Prosody

2.6 Phonological Processes

2.6.1 Assimilation of loanwords

2.6.2 Vowel~zero alternation

Vowel~zero alternations refer to an extensive series of morphophonological changes in Iridian causing certain vowels to disappear in certain contexts. Vowels that alternate with zero (i.e., that disappear in certain morphological contexts) are said to be *unstable* vowels.

Below is a comprehensive list of environments that trigger vowel zero alternations. Here C represents any phonologically permitted consonant or consonant cluster, V a short vowel and VV a long vowel or a diphthong,

_CVCVC STEMS

The final V is generally unstable in the following environments

1. Stem has the same vowels. Examples: **daman** → **damna** 'lips'; **ploit** → **poilte** 'pancake'; **poviasztak** → **poviesztkam** 'I ate'

2. V_2 is a short vowel. Examples: **zsedym** → **zsedme** ‘beard’; **elaim** → **elme** ‘fog’
3. Stressed vowels and most loanwords do not follow this rule. Examples **majoniez** → **majonieza** ‘mayonaise’ but **mobil** → **mubla** ‘phone’
4. Where the deletion would cause the resulting consonant to be geminated or to be a voiced/unvoiced pair of the same consonant, the preceding vowel is lengthened. In the case of voiced/unvoiced pairs, only the voiced consonant is kept. Example: **uidet** → **úide**
5. The presence of a soft consonant in the last or the penultimate consonant position normally inhibit vowel~zero alternation.

STEM-FINAL VOWEL~ZERO ALTERNATION

SUFFIX-INITIAL VOWEL~ZERO ALTERNATION

1. CVCVC or CVVCVC stems. The final V is generally unstable in the below contexts
- 2.
3. Suffix-initial vowel~zero alternation

2.6.3 Vowel~vowel alternation

Vowel~vowel alternations form an integral part of Iridian morphophonology. These changes can be grouped into two broad categories: (1) pluralizing ablaut, which involves the raising or fronting of stem vowels to form the plural of most native nouns and (2) marginal apophony involving the vowels /ε/ and /ɔ/.

The first category is one of the most common processes in Iridian, used in the formation of marked plurals. In general, it involves the fronting of back vowels (e.g., o to oi), the raising of low front vowels (ai to oi) and the diphthongization of high front vowels. This change does not affect vowel length, so that long vowels remain long and short vowels remain short. This process is discussed in detail in the chapter on nouns.

The second category involves the short vowels /ɔ/ and /ε/, and in some cases /v/. This class of changes is normally observed in the following:

1. In VC final words, where C is a soft consonant, if followed by a consonant final suffix, or if metathesis or vowel~zero alternation causes the deletion of the initial vowel of the suffix /v ε ɔ/ become /ε ɪ ʊ/. The soft consonant remains as soft, although this is not reflected in the orthography
- (1) a. +sztratý + ak → szovtretka (I) walked

2. Short [ɔ] in a stable position alternates with [u] and short [ɛ] is a stable position after a soft consonant with [ɪ], when followed by a voiced plosive after the deletion of an unstable vowel.
 - (2) a. **lobek** ‘apple’ → **lubka** ‘apple-PAT’
 - b. **hotel** ‘hotel’ → **hotela** ‘hotel-PAT’
3. In $_PaC$ final words, where C is a voiceless obstruent (either phonemically or because of assimilation) or a nasal, [ɛ] becomes [ɛ] and [ɛ] becomes [ɪ] and the voiceless consonant is voiced when followed by a vowel-initial suffix.
 - (3) a. **szviad** ‘star’ → **szvieda** ‘star-PAT’
 - b. **pian** ‘fire’ → **piena** ‘fire-PAT’
- (4) a. **miet** ‘pot’ → **mida** ‘pot-PAT’
- b. **máliek** ‘bonfire’ → **máliga** ‘bonfire-PAT’

2.6.4 Reduplication

Reduplication is a process whereby the stem or a part of the stem of a word, or the word itself is repeated with little or no change.

Reduplication is only partially productive in Iridian. Most noun reduplicated noun forms, for example, have fossilized meanings.

borsz ‘thunder’	→	boborsz ‘rumbling sound’
mán ‘child’	→	mánen ‘grandchild’
maty ‘mother’	→	mádaty ‘godmother’

2.6.5 Metathesis

SLOT A INFIXES

Slot A prefixes (grammatical voice and copulative form) metathesize the root when the onset is a cluster of two or more consonants subject to the below rules. In the examples we assume a affix of the type ?VC . The glottal stop is deleted when the infix is added. The subscripts n and s are used to for phonemes relating to the infix and the stem respectively.

1. Liquid-final clusters: $C_sLV_s + \text{?V}_nC_n \rightarrow C_sV_nLC_sV_n$

trápe ‘cloud’	→	turtápe ‘cloudy’
tresz ‘write (ST)’	→	torveszé
szran ‘drink (ST)’	→	szirnaná
2. Nasal-final clusters: $C_sNV_s + \text{?V}_nC_n \rightarrow C_sV_nNC_sV_n$

dnoja ‘money’	→	duntoja ‘rich’
----------------------	---	-----------------------

2.7 Orthographic representation

2.7.1 *Alphabet*

The Iridian language uses the Latin script with the following 31 letters: **a, b, c, cs, d, dc, dz, e, f, g, h, i, j, k, l, m, n, o, p, q, r, s, sz, t, u, v, w, x, y, z, zs.**

In addition, the following vowel digraphs are also used but they are not considered as separate letters: **ai, oi, ui.**

The digraphs **dc** and **dz** as well as the letters **f, q, w** and **x** are marginal and are only used for loanwords.

Iridian uses two types of diacritics, the acute accent (´), which is used to mark long vowels, and the circumflex accent (^) used to mark nasal vowels. Accented characters are not considered as separate letter.

Table 2.9: The Iridian alphabet.

SYMBOL	NAME	IPA	SYMBOL	NAME	IPA
A a	á	[ɒ]	N n	en	[n]

Part II

Morphology and Syntax

VERBS

3.1 Categories

Finite verbs (**lounehlý**) are marked for the following grammatical categories:

1. *Aspect*. Iridian has three primary aspects: perfective, imperfective and contemplative; and two secondary ones: retrospective and prospective.
2. *Voice*. Iridian has a strong tendency to leave the topic of the sentence unmarked, instead encoding the primary information on the verb. Due to this, voice must be explicitly marked on the verb. Iridian has the following grammatical voices:: agentive, patientive, benefactive, instrumental, locative and reflexive.
3. *Mood*. Besides the unmarked indicative, Iridian has the following grammatical moods: subjunctive, conditional, hortative, optative, abilitative, permissive and non-volitive. In addition, secondary prefixes are used to express what would otherwise could be considered as moods: inceptive, causative and reciprocative.

Verbs are also marked for person, although this is done by the addition of clitic pronouns and not through a separate conjugation paradigm. Iridian verbs are not marked for tense, gender, or number.

Iridian verbs have four classes of non-finite forms: the gerund, the converb, the supine and the generic nominal formed with **-ou**. The non-finite verb forms are derived from the uninflected verb stem except the generic nominal in **-ou** which can only be formed from a fully-inflected verb stem. A fifth class exists—the infinitive—but this form is largely defunct and is only used in certain compound constructions. Infinitives end in **-á** and is used as the citation form of a verb.

3.2 Verb stems and citation forms

The citation form of a verb is the uninflected infinitive, a fossilized form rarely used outside of a very few periphrastic construction. The uninflected infinitive is formed by the verb stem and the infinitive markers *-á* or *-é*, depending on the quality of the stem vowel.

3.3 Agglutination vs conjugation

Iridian is superficially an agglutinative language. However, agglutination only exists in its full form in the indicative mood and in a reduced form in the optative moods. The conditional, quotative and subjunctive has entirely dropped the agglutination, instead using fusional conjugation paradigm. These system are normally called Type I, Type II, and Type III paradigms respectively.

Nevertheless, Iridian verbs are analyzed to have eight primary affix slots. Five of these slots are for suffixes and are numbered from one to five counting from the stem. There are three prefix slots, used for both infixes and prefixes, labeled A to C starting from the stem. Table 3.1 shows the affix slots used for these three groups of grammatical moods.

Table 3.1: Verbal affix slots.

SLOT	INDICATIVE	OPTATIVE	OTHER
C	Negation	Negation	Negation
B	Secondary verb prefixes	–	–
A	Voice	–	–
0	Stem	Stem	Stem
1	Secondary pronoun	–	Paradigm ending
2	Mood	Voice	–
3	Aspect	Aspect	–
4	Primary pronoun	Primary Pronoun	–
5	Non-finite ending	Mood	–

3.3.1 Stem

There are two types of verb stems in Iridian: verbal and nominal. Iridian does not have a clear distinction between nominals and verbals. In this sense, verbal stems refer to stems that can be used on their own as imperatives. On the other hand, nominal stems refer to stems that could be used on their own as nouns or adjectives.

Examples of verbal stems include **piaštá** ‘to eat’, **vyté** ‘to go’, **kravná** ‘to cry’, **cselé** ‘to leave’, etc. Examples of nominal stems include **pledy** ‘red’; **aro** ‘water’, etc.

Some stems contain an unstable vowel

3.3.2 Type I paradigm

INDICATIVE MOOD

The simplest construction other than the unmarked stem involves a prefix for voice, and suffixes for the modality, aspect and the primary pronoun. Slot 4 suffixes have a strong tendency to be dropped when evident from context. As such in the unmarked indicative mood, most verbs would have only the affixes for voice and aspect.

(1) **poviaštak**, ‘(I) ate.’

C	B	A	STEM	1	2	3	4	5
-	-	<ov>	piašt	-	Ø	-ak	Ø	-

Slot 1 is used for secondary clitic pronouns, i.e., the object of the verb. Secondary clitic pronouns are also often dropped, however, and the inanimate 3rd person pronouns are almost never used.

(2) **voideškem**, ‘I saw you.’

C	B	A	STEM	1	2	3	4	5
-	-	<oiv>	vyd	eš	Ø	-ek	-em	-

There is a separate conjugation paradigm for the negative, synthesized with slot 3 aspect suffixes. There are, however, some 60 irregular verbs that use the negative prefix **ná-/nái-** instead of the negative aspectual suffixes, in addition to stative or copulative verbs, which can only be used with the prefix **ná-/nái-**.

(3) a. **voidešoit**, ‘I didn’t see you.’

C	B	A	STEM	1	2	3	4	5
-	-	<oiv>	výd	-eš	Ø	-oit-	-em	-

b. **nájemnoutalý**, ‘Your place is closed.’

C	B	A	STEM	1	2	3	4	5
ná-	je-	-	mnout	-	Ø	-	-alý	-

IMPERATIVE MOOD

The Iridian imperative mood has two forms: a singular and a plural. Unlike the indicative mood, there is no separate conjugation paradigm for the negative; instead the prefix **ná-/nái-** is used, analyzed as a slot C prefix.

(4) a. **piešte**, ‘Eat!’

C	B	A	STEM	1	2	3	4	5
-	-	Ø	piešt	-	-o	-	-	-

b. **nápiešet**, ‘Don’t eat!’

C	B	A	STEM	1	2	3	4	5
ná	-	Ø	piešt	-	-et	-	-	-

COPULATIVE FORM

Verbs have two copulative forms in Iridian. The copulative in **je-** is a slot B prefix while the copulative in **ut/uit** is a slot A infix. If not followed by the prefix **je-** requires an epenthetic **-o/-eu**, analyzed as a slot 5 suffix.

(5) **jemožlam**, ‘I am living.’

C	B	A	STEM	1	2	3	4	5
-	je-	-	možl	-	-	-	-am	-

(6) **Marek jesorto**, ‘Marek is standing.’

C	B	A	STEM	1	2	3	4	5
-	je-	-	sort	-	-	-	Ø	-o

3.4 Voice

Iridian often prefers to encode information on the verb instead of through case marking on nouns. As such, all verbs must be explicitly marked for voice.

Table 3.2: Suffixes used to mark grammatical voice.

	ENDING
Agentive	-aš-
Patientive	-in-
Benefactive	-ar-
Locative	-á-
Instrumental	-
Reflexive	-
Reciprocal	

3.4.1 Agentive voice

The agentive voice is used if the subject of the verb is the agent of the action.

(7) Sa **piašček**.

already eat-AV-PF

‘(I) already ate.’

The affix **-aš-** assimilates to the consonant ending the root, with the vowel /ɐ/ normally dropped, subject to the following rules:

- č: for roots ending with c, č, k, t
 - jelcá + -aš- → jelč-, ‘to dance’
 - zdieká + -aš- → zdíč-, ‘to blow’
 - piaštá + -aš- → piašč-, ‘to eat’
- z: for roots ending with b, l, m, n, r¹

¹This change does not involve the deletion of the final consonant in the root.

- ž: for roots ending with d, g, z, ž
 - baž- + -aš- → báž-, ‘to give’
 - stojá + -aš- → stóž-, ‘to go’
- š: for all other endings²

Where the assimilation involves the deletion of the final consonant in the root, the preceding vowel is lengthened in compensation if the resulting root would then end in an open syllable.

- (8) **Zdúšek.**
 (instead of ***zdušek** from zdušá + -aš-)
 ‘(I) took a shower.’
- (9) **Piašček.**
 (not ***piášček.**)
 ‘(I) ate.’

If the remnant vowel is the i-glides -ie- or the diphthongs -ei- and -ou-, the remaining vowel would simplify to *í*, *í* and *ú*, respectively. Consider for example the verb **zdieká** ‘to blow’:

- (10) **Lest zdičalí.**
 wind blow-AV-PROG
 ‘The wind is blowing.’

Nevertheless the vowel [ʊ] in the root resurfaces in the following cases:

- Verbs ending in -irná:
- Verb root ending in a consonant cluster with a final liquid, nasal, or v

3.4.2 *Patientive focus*

A verb in the patient focus (glossed PAT) indicates that the topic of the sentence is the patient of the verb.

- (11) **Marek vindekem.**
 Marek <PV>see-PF-1s
 ‘I saw Marek.’

² -h + -aš- , -s + -aš- and -š + -aš- both simplify to -š-, while the rest retain the final consonant.

3.4.3 Benefactive focus

The benefactive focus (glossed BEN) is used when the subject of the sentence is the benefactor or director object of the verb. Verbs often change meaning when used in the benefactive focus.

- (12) **Mač sega nazdarek.**
 mother flower-PAT buy-BEN-PF
 ‘(I) bought my mother flowers.’

- (13) **Kova piaštaralí.**
 cow eat-BEN-PROG
 ‘(I am) feeding the cows.’

3.4.4 Locative Focus

- (14) **Jé kopnažalíc.**
 you laugh-LOC-PROG-3S.ANIM
 ‘He is laughing at you.’

3.4.5 Instrumental Focus

3.4.6 Reflexive Focus

The reflexive focus (glossed REF) is used when the patient of the verb is also the agent.

The reflexive cannot be used with verbs with the prefix **ce-**.

3.4.7 Usage

The differences

3.5 Grammatical Aspect

3.5.1 Perfective aspect

The perfective aspect (glossed PF) indicates an action that has been completed in some specific instance.

- (15) **Bych na gnaža Marek vdinek.**
 yesterday LOC school-PAT Marek see-PV-PF
 ‘(I) saw Marek at school yesterday.’

Table 3.3: Aspect markers in the indicative mood.

ASPECT	AFFIX
Perfective	-ek
Retrospective	-aní
Imperfective	-ál
Progressive	-alí
Contemplative	-aç
Prospective	-il
Cessative	-eic

(16) **Vaško piaštnek.**

pastry eat-PV-PF

'(I) ate (the) cake.'

The vowel in the suffix is unstable and the ending would normally collapse to **-k** when followed by another vowel. Consider the above two sentences followed by the second person singular clitic pronoun **-aš/eš**.

(17) **Bych na gnazsa Marek vindekeš.**

yesterday LOC school-PAT Marek <PV>see-PV-PF-2s

'You saw Marek at school yesterday.'

(18) **Vaško piniaštkaš.**

pastry <PV>eat-PF-2s

'You ate (the) cake.'

When negated, the perfective indicates something that ought to be done but had not been done. To state that something simply did not happen, the negative of the retrospective is used instead.

(19) **Zátélévonirnašek.**

NEG-telephone-AV-PF

'(I) failed to call.'

(20) **Zátélévonirnašaní.**

NEG-telephone-AV-RET

'(I) didn't call.'

3.5.2 Retrospective aspect

The retrospective aspect (glossed *RET*) is used for a past action that has a continuing relevance in the presence. Consider, for example, the following sentences: (a) *I went to Amsterdam last week*; and (b) *I have been to France in my childhood*. Iridian would translate the verb in (a) using the perfective and the verb in (b) using the retrospective.

- (21) **Hroná tímu na Budapešta možlašaním.**

three year-INST LOC Budapest-PAT live-AV-RET-1s

‘I have been living in Budapest for three years.’

- (22) **Páku šavolnaníc.**

before-INST hurt-PV-PF-3s.ANIM

‘She has been hurt before.’

The retrospective is also often used to imply non-volition or the accidental/circumstantial nature of an action. Similarly the retrospective is used with verbs of emotion or state (e.g., *cezuštalá*, ‘to become happy’ from *zuštal* ‘happy’). The perfective, on the other hand, is almost exclusively used with the causative in these cases.

- (23) a. **Vdešek še neicezuštalašaním.**

see-2s-PF with INCEP-be.happy-AV-RET-1s

‘I became happy when I saw you.’

- b. **Do pacezuštalnikeš.**

1s.WK CAUS-be.happy-PV-PF-2s

‘You made me happy.’

- (24) **Váz noprizaní.**

vase break-REF-RET

‘The vase broke (accidentally).’

3.5.3 Continuous and progressive aspects

Iridian uses the continuous and progressive aspects to denote actions that have not been completed yet and/or are in the process of happening/occurring. The continuous aspect (glossed *CONT*) is used to mark a state of being while the progressive aspect (glossed *PROG*) is used to mark a dynamic activity.

- (25) **Náu rištnál.**
 clothes wear-PV-CONT
 ‘(I’m) wearing clothes.’

- (26) **Náu rištnalí.**
 clothes wear-PV-PROG
 ‘(I’m) putting on clothes.’

The continuous aspect is also used to denote a habitual action.

- (27) **Sholu de gnaža stožál.**
 daily-INST ILL school-PAT go-AV-CONT
 ‘(We) go to school everyday.’

- (28) **Dá na Praha možlál.**
 1s.STR LOC Prague-PAT live-CONT
 ‘I live in Prague.’

To emphasize the habitual nature of an action, a nominalized construction is often used.

- (29) **Nažem řacenálou.**
 friend-1s smoke-CONT-NZ
 ‘My friend is a smoker.’

3.5.4 *Prospective aspect*

The prospective aspect (glossed *PROSP*) is primarily used in secondary clauses to indicate actions that are about to be started in relation to another action. It can also be used in the main clause to indicate an action in the immediate future.

3.5.5 *Cessative aspect*

3.6 Secondary Verbal Prefixes

In addition to the prefixes used for verbal derivation, Iridian has three prefixes that are analyzed as separate moods.

3.6.1 The reciprocative so-

3.7 Grammatical Mood

3.7.1 Indicative

3.7.2 Imperative

Iridian has an imperative mood formed by attaching the suffix **-e** in the singular and **-et** in the plural to the verb stem.

piašte ‘eat’
piašetet ‘eat (PL)’

The imperative is largely considered rude and impolite in modern speech, with the hortative being used even for commands. Nonetheless, the imperative can be often found in literary texts.

- (30) **Nátiezne.**
NEG-kill-IMP
‘Thou shall not kill’

The imperative can be combined with the reciprocative prefix **so-** to form the adhortative, similar in meaning to the English ‘Let’s...’. Nevertheless, the hortative construction with verbs in **so-** is still preferred.

3.7.3 Subjunctive

The subjunctive mood (glossed **SBJ**) is used for actions or events that are not or are not known to be true or factual. The subjunctive has two forms: the perfective subjunctive in **-íl** and the imperfective subjunctive in **-ú**, glossed as **SBJ.PF** and **SBJ.IPF** respectively.

The copula has the following forms in the subjunctive, all of which are not inflected:

Table 3.4: Subjunctive forms of the copula

	NON-NEG	NEG
Imperfective	niec	pośc
Perfective	vace	nav

The perfective-imperfective distinction of the subjunctive is more properly analyzed as a temporal distinction, i.e., past and non-past subjunctive.

Table 3.5 shows the conjugation paradigm of the verb **piaštá** in the subjunctive mood.

Table 3.5: Conjugation paradigm, subjunctive mood.

piaštá ‘to eat’	
Imperfective	piaštú
Negative imperfective	zápiaštú
Perfective	piaštíl
Negative perfective	zápiaštíl

The following are some specific uses of the subjunctive mood in Iridian:

JUSSIVE/DESIDERATIVE

The subjunctive is used in indirect constructions of verbs for issuing orders, commanding, exhorting, etc.

- (31) **Martin na America žnohú to čeználíc.**
 Martin LOC America-PAT study-SBJ.IPF RZ want-CONT-3S.ANIM
 ‘He wants Martin to study in America.’
- (32) **Marek zašnl to Tunek dále.**
 Marek sing-SBJ.IPF RZ Tunek say-PF
 ‘Tunek told Marek to sing.’

DUBITATIVE

The subjunctive is used with verbs expressing doubt, uncertainty or disbelief.

WITH VERBS EXPRESSING EMOTION

- (33) **Marek zašnl to Tunek dále.**
 Marek sing-SBJ.IPF RZ Tunek say-PF
 ‘Tunek told Marek to sing.’

WITH THE CONDITIONAL MOOD

The subjunctive is used in the main clause if the verb in the dependent clause is in the conditional *irrealis* mood.

(34) **Dá prezident jenem,**

a

a

IRREALIS

3.7.4 *Conditional*

The conditional mood is used for conditional or hypothetical clauses. The table below shows the conjugation paradigm for the conditional mood for both regular verbs and the copula. The Iridian conditional mood is not a true conditional mood grammatically, since it is marked on the verb in the dependent clause (protasis), instead of the main clause.

Table 3.6: Conjugation paradigm, conditional mood.

	REGULAR VERBS	COPULA
<i>Realis</i>	-ouhná	viec
Neg. <i>Realis</i>	-ouhnál	ven
Non-Past <i>Irrealis</i>	-ouc	jenouc
Neg. Non-Past <i>Irrealis</i>	-oucik	pięc
Past <i>Irrealis</i>	-áne	jenem
Neg. Past <i>Irrealis</i>	-oucná	jet

CONDITIONAL REALIS

The conditional *realis* mood (glossed COND.RL) is used in two ways:

1. In sentences that express a factual implication rather than a hypothetical situation or a potential future event, e.g., ‘If you heat water to 100 C, it will boil.’
2. In ‘predictive’ constructions, i.e., those that concern probable future events.

CONDITIONAL IRREALIS

The conditional *irrealis* mood (glossed COND.IRR) is used with hypothetical, typically counterfactual, events. Iridian distinguishes between past and non-past *irrealis* moods.

3.7.5 *Hortative*

The hortative mood is used for requests. Although Iridian has an imperative form (the unmarked form of the verb), the hortative is normally used in its place. The hortative marker should always appear at the end of the word.

- (35)
- Jěša mineška.**

door-PAT close-2S-HORT

'Close the door.' *literally*, 'May you close the door.'

To soften a command, the expression *am luhninka* (may someone be thanked for...) is normally used.

- (36)
- Jěša minkeš ceš am luhninka.**

door-PAT close-PF-2S RZ.ABL because thank-PV-HORT

'Please close the door.' *literally*, 'May (you) be thanked because you closed the door.'

The hortative is used with the reciprocative prefix **so-** to form the adhortative (similar to the English construction with 'Let's + VERB'). This construction cannot be used with **am luhninka**.

- (37)
- sop**

door-PAT

'Please close the door.' *literally*, 'May (you) be thanked because you closed the door.'

3.7.6 Optative

The optative mood (glossed OPT) is used for expressing wishes. The optative mood requires two aspect marking, although the primary ending is marked if it is in the imperfective mood.

3.7.7 Quotative

The quotative mood (glossed QUOT) is used to express secondhand information, or when the speaker wishes to make explicit that s/he did not witness the event himself/herself.

Clitic pronouns cannot be used with the quotative mood.

Table 3.7 shows the conjugation paradigm for regular verbs and the copula.

- (38)
- Já na duma neškec to maty dálmek.**

you-STR LOC house-PAT COP.QUOT.IPF RZ mother say-1S.PF

'(My) mother told me you are at home.'

- (39)
- Já na duma necim to maty dálmek.**

you-STR LOC house-PAT COP.QUOT.SBJ.NPST RZ mother say-1S.PF

'(My) mother told me you might be at home.'

Table 3.7: Conjugation paradigm, quotative mood

	piaštá , ‘to eat’	COPULA
Perfective	piaštát	vacet
Neg. perfective	nápiaštát	necê
Retrospective	piaštác	—
Neg. Retrospective	nápiaštác	—
Imperfective	piaštút	neškec
Neg. imperfective	nápiaštút	pošnec
Progressive	piaštiec neškec	—
Neg. progressive	piaštiec pošnec	—
Future	piaštôš	vacko
Neg. Future	nápiaštôš	necko
Subjunctive Non-Past	piaštók	necim
Neg. Sub. Non-Past	nápiaštók	pocim
Subjunctive Past	piaštocke	vacim
Neg. Sub. Past	nápiaštocke	nêcim

(40) **Mnúcs tiezninát.**

husband kill-PV-QUOT.PF

‘(She) killed (her) husband (or so I heard).’

Direct speech, however, does not use the subjunctive.

(41) **—Tak dá, dálek Tomáš.**

here 1s.STR say-PF Tomáš

‘‘I’m here,’’ Tomáš said.’

The following verbs are considered verba dicendi in Iridian and would trigger the quotative: **dálá** ‘to say’, **vadá** ‘to think’, **kvuštá** ‘to hear’, **vydá** ‘to see’, **égešá** ‘to ask’, **ohletá** ‘to remember’, **hová** ‘to recount, tell a story’. The verb **vadá** is exclusively used with the subjunctive quotative.

(42) **Z što óké necim to Lukáš vadê.**

already this OK COP.QUOT.SBJ.NPST RZ Lukáš think-IPF

‘Lukáš thinks it should be OK by now.’

(43) **Marek bych jsenát to kvuštke.**

Marek yesterday arrive-QUOT.PF RZ hear-PF-1s

‘I heard Marek has arrived.’

- (44) **Pošnelý tajomstác to kvuštek.**

father-2PL die-QUOT.RET RZ hear-PF

‘(We) heard that your father died.’

- (45) **Dá tak bych vacim to náohletê.**

1s.STR here yesterday COP.QUOT.SBJ.PST RZ NEG-remember-IPF

‘(I) don’t remember if I was here yesterday.’

Secondary verba dicendi are formed with an adverbial construction using the imperfective converb in **-iec**.

- (46) **Já mnou necim to Martin priviec vadê.**

you correct COP.QUOT.SBJ.NPST RZ Martin agree-CV think-IPF

‘Martin agrees that you are right.’

The quotative is also used emphatically to repeat a quote (often made by the speaker himself or herself), or to express the speaker’s frustration or affirmation. When used this way, the verbum dicendi is omitted, and the expletive **nó** is often added.

- (47) **Mnou necim to nó!**

correct COP.QUOT.SBJ.NPST RZ EXPL

‘(I’ve been telling you) it is right.’

- (48) **Dá roctymút to!**

1s dance-ABL-QUOT.IPF RZ

‘(But) I can dance.’

The tense/aspect of the quotative mood follows that of the quoted clause, independent of the tense/aspect of the verbum dicendi.

3.7.8 *Abilitative and Permissive*

The abilitative (glossed **ABL**) and permissive (glossed **PERM**) are related verbal moods used in expressing the speaker’s (or the subject of the sentence’s) ability to do something. The abilitative is used to indicate capability while the permissive is used to indicate whether or not an action is allowed or permitted.

- (49) **Sa anglecnu nározshovymas.**

INST English.language-INST NEG-speak-ABL-3s.ANIM

‘He cannot speak English.’

- (50) **De rádaka z názahranaveš.**
 ILL building-1PL.EXCL-PAT already NEG-enter-PERM-2s
 ‘You’re no longer allowed to enter our building.’

The permissive mood is often used for negative commands.

- (51) **Tak náradzavuj.**
 here NEG-smoke-PERM-4GEN
 ‘No smoking.’ *literally*, ‘One cannot smoke here.’

3.7.9 Non-Volitive

The non-voliti

(24, rep.) ago

3.8 Non-Finite Verb Forms

3.8.1 Gerund

The gerund (glossed GER) refers to the non-finite verb form used as a noun. The gerundive prefix **po-** is always used with the nominalizing suffix **-ou**, both of which are added to the uninflected verb root.

- (52) a. **Ščenek.**
 forget-PF
 ‘He forgot (it).’
 b. **Ščenekou Jan.**
 forget-PF-NZ Jan
 ‘Jan (is) the one who forgot (it).’
 c. **Poščenou nauhlý.**
 GER-forget-NZ difficult
 ‘Forgetting is difficult.’

When nominalizing complex clauses, both the agent and the theme are marked in the genitive, with the agent always appearing first.

- (53) a. **Pášta Janom voštnek.**
 pasta Jan-AGT cook-PV-PF
 'Jan cooked (some) pasta.'
- b. **Janí páští povoštou**
 Jan-GEN pasta-GEN GER-cook-NZ
 'Jan's cooking of the pasta'

The suffix **-ál**, used to mark the continuous aspect, may be infixed to the gerund to indicate that the action is repetitive.

- (54) a. **Jan nidek.**
 Jan stand.up-PF
 'Jan stood up.'
- b. **Janí ponidálou buvec.**
 Jan-GEN GER-stand.up-CONT-NZ annoying
 'Jan's standing up again and again is annoying.'

3.8.2 *Converbs*

Converbs (glossed cv) is a non-finite verb form often used for adverbial constructions. There are two converb forms in Iridian: the imperfective **-iec** (glossed cv.IPF) and the perfective **-iêce** (glossed cv.PF).

- (55) **Tereza kravniec nóveu cselek.**
 Tereza cry-CV.IPF room-ABL leave-PF
 'Tereza left the room crying.'
- (56) **Nóveu cseliêce Tereza ukravnek.**
 room-ABL leave-CV.PF Tereza INCHO-cry-PF
 'Having left the room, Tereza started to cry.'

The perfective **-iêce** is often used in clause linking.

- (57) **Oštiêce krazkem.**
 read-CV.PF understand-PF-1s
 'I read and understood.'

Clauses expressing reason is usually expressed by a converbial construction.

- (58) **Za eksama názhaziêce, Martin órek.**
 for exam-PAT NEG-study-CV.PF Martin fail-PF
 'Martin failed the exam because he didn't study.'

3.8.3 Nominalization

3.8.4 Supine

The supine is a non-finite verb form formed used to indicate necessity or purpose. There are four forms as shown below:

Table 3.8: Endings used for the supine

	SUPINE OF PURPOSE	SUPINE OF NECESSITY
Nominal	-ity	-áš
Non-nominal	-ice	-ášce

- (59) »Ána Karenina« za gnazsa oštášce ko htoš.

Anna Karenina for school-PAT read-SUP ATT book

‘I have to read *Anna Karenina* for school.’

- (60) Htoš vstuninkem to oštice.

book buy-mkpV-pf-1s RZ read-SUP

‘I bought the book to read.’

The infinitive form of the supine of purpose *-icá* is used with adjectival adverbs:

- (61) Just zacepšcsemem to nosiênicá.

news CAUS-be.sad-1s RZ hear-SUP-INF

‘I am sad to hear the news.’

3.9 Copular Constructions

3.9.1 Null copula

Copular sentences are a minor sentence type where the predicate is not a verb. For the purposes of this grammar, we narrow down our definition of copular constructions to the following:

- (62) a. *Equative*: Marek is the doctor (we are talking about).
 b. *Inclusive*: Marek is a doctor.
 c. *Attributive*: Marek is tall.
 d. *Locative*: Marek is in the hospital.

Iridian does not make a distinction between equative, inclusive and attributive clauses. Locative clauses on the other hand, may be expressed using a copular or an existential construction, as will be discussed in this section.

Iridian is a superficially a zero-copula language and the most common way to form copular sentences is mere juxtaposition.

(63) **Marek doktor.**

Marek doctor

‘Marek (is a/the) doctor.’

The above example could either be taken to mean (1) Marek is a doctor (inclusive), or (2) Marek is the doctor (equative). Generally, though, Iridian uses word order to distinguish between equative and inclusive clauses.

(64) a. *Inclusive*: {item in class}_N ∅ {class}_P

b. *Equative*: {class}_N ∅ {item class}_P

To avoid ambiguity, Example 63 can be reformulated to either of the following sentences:

(65) a. **Marek doktor.**

Marek doctor

‘Marek is a doctor.’

b. **Doktor Marek.**

doctor Marek

‘Marek is the doctor.’

The inversion of word order is not strongly grammaticalized with NP-NP sentences, i.e., both sentences in Example 65 can still be used interchangeably without a change in meaning and preference is given on the one over the other when there is an ambiguity. This is not the case with attributive clauses, i.e., sentences with adjective or adjective phrase predicates. Consider for example the sentence below:

(66) **Marek rózým.**

Marek tall

‘Marek is tall.’

Inverting the word order of the sentence above would change the adjective to a substantive since modifiers cannot occupy the topic position.

(67) **Rázym Marek.**

tall Marek

‘The tall one is Marek.’

Iridian also distinguishes between attributive clauses expressing permanent conditions and clauses expressing temporary conditions, with the latter being expressed using existential constructions in certain adjectives.

(68) ***Marek morec.**

Marek hungry

‘Marek is hungry’

(69) **Marka ješ morec.**

Marek-PAT EXST hunger

‘Marek is hungry’

A full list of adjectives/modifiers that use the existential construction can be found in the section 3.10.

The copula, however, cannot be omitted in grammatical moods other than the indicative.

3.9.2 *Negative copula*

Iridian has the negative copula **česná**.

(70) **Marek doktor česná.**

Marek doctor COP.NEG

‘Marek is not (a/the) doctor.’

The inversion of word order may also be used when one wants to avoid ambiguity:

(71) **Doktor Marek česná.**

doctor Marek COP.NEG

‘Marek is not the doctor.’

3.10 Existential Constructions

An existential sentence is a specialized construction used to express the existence or presence of someone or something. The particle **ješ** and its inverse **niho** are used to form existential sentences.

- (72) **To ješ zarno.**
 here EXST people
 ‘There are people here.’

- (73) **To niho zarno.**
 here EXST.NEG people
 ‘There is no one here.’

Statements expressing location use a copular construction, although an existential construction is used in the negative.

- (74) **Dá na duma.**
 1s.STR LOC house-PAT
 ‘I’m at home.’

- (75) **Na duma niho dá.**
 LOC house-PAT EXST.NEG 1s.STR
 ‘I’m not at home.’

The particles **ješ** and **niho** must always precede the noun whose presence or existence is being expressed.

- (76) **Na ránema ona ješ htoš.**
 LOC desk-1s-PAT one EXST book
 ‘There is one book on my desk.’

- (77) **Mÿ ješ mulaž.**
 two EXST door
 ‘There are two doors.’

3.10.1 Conjugation paradigm

3.10.2 Possession

Existential constructions are also used to indicate possession, with the possessor marked in the patientive case.

- (78) **Marka ješ oblač.**
 Marek-PAT EXST pet
 ‘Marek has a pet.’

- (79) **Tomáša niho mlaz.**
 Tomáš-PAT EXST brother
 ‘Tomáš does not have a brother.’

3.10.3 Impersonal constructions

- (80) **Martina ješ trešnikou na tropa.**
 Martin-PAT EXST write-PV-PF-NZ LOC wall-PAT
 ‘Martin wrote something on the wall.’
- (81) **Voštnikouva sa ješ piaščkou?**
 cook-PV-PF-NZ-PAT already EXST eat-AV-PF-NZ
 ‘Did somebody eat what (I) cooked?’

3.11 Formation of Verbs

3.11.1 External Derivation

Loanwords ending in **-ace** from the Latin change the final e to á:

administrace	→	administracá	‘to administrate’
akuzace	→	akuzacá	‘to accuse’
diferenzace	→	diferenzacá	‘to differentiate’
separace	→	separacá	‘to separate’

Some Latin loanwords are borrowed first from German. Loanwords ending in **-ieren** become **-irná**.

akzeptieren	→	akceptirná	‘to accept’
konservieren	→	koncervirná	‘to conserve’
produzieren	→	producirná	‘to produce’
vandalieren	→	vandalirná	‘to deface’

3.11.2 Internal Derivation

Table 3.9: Verbal Derivational Affixes

AFFIX	EXAMPLES
nie- + ADJ ‘to cause something to become ADJ’	loš ‘new’ → nielošá ‘to renew’ preseh ‘young’ → niepreshá ‘to rejuvenate’ avic ‘long’ → nieavicá ‘to lengthen’ gem ‘soft’ → niegemá ‘to soften’ vyne ‘dry’ → nievyneá ‘to dry’

continued on the next page

Table 3.9: Verbal derivational affixes

(continued)

AFFIX	EXAMPLES
ce- ³ + ADJ 'to cause oneself to become ADJ'	kdavidy 'clean' → cekdavicá 'to take a bath' rum 'old' → cerumá 'to grow old' šeznom 'big' → cešeznomá 'to grow up' vyne 'dry' → cevyneá 'to dry oneself'
hó- + NOUN 'to use N in a particular way'	tvem 'tongue' → hótvemá 'to lick' kov 'hammer' → hóková 'to hammer' šeznom 'big' → cešeznomá 'to grow up' vyne 'dry' → cevyneá 'to dry oneself'
deš- + NOUN 'to act in the manner of N'	tvem 'tongue' → hótvemá 'to lick' rum 'old' → cerumá 'to grow old' šeznom 'big' → cešeznomá 'to grow up' vyne 'dry' → cevyneá 'to dry oneself'
má-iv + NOUN 'to do something usually done in NOUN'	mrc 'market' → mámrcivá 'to shop' gnazsa 'school' → mágnazsivá 'to study in' šeznom 'big' → cešeznomá 'to grow up' vyne 'dry' → cevyneá 'to dry oneself'
sen-/sem- + VERB 'to VERB incorrectly'	oštá 'to read' → senoštá 'to misread' rum 'old' → cerumá 'to grow old' šeznom 'big' → cešeznomá 'to grow up' vyne 'dry' → cevyneá 'to dry oneself'

³Verbs in **ce-** cannot be in the reflexive focus.

NOUNS

Nominal morphology in Iridian is relatively simpler compared to the corresponding process.

4.1 Grammatical Categories

4.2 Number

Nouns in Iridian do not inflect for number. Thus the word **byl**, for example, can mean either ‘child’ or ‘children’ depending in context. The same form is used when the noun is preceded by a numeral.

- (1) **hroná byl**
 three child
 ‘three children’

Nevertheless, the particle **nie** can be used to denote plurality, although this is largely optional and would be often dropped if the grammatical number of the noun is clear from the context. This is more common for inanimate nouns. Note also that **nie** cannot be used for mass nouns.

- (2) **Nie byl zapóček.**
 PL child laugh-AV-PF
 ‘The children jumped.’

- (3) ***Na duma nie ješ piaštou.**
 LOC house PL EXST food
 ‘There is food in the house.’

The particle **nie** always precedes the noun it modifies, except in existential clauses where it comes before the existential particle **ješ**¹. **Nie** can obviously not be used with the negative particle **niho**.

¹ The sequence is pronounced as if written *niješ* [ɲiːʃɛʃ]

- (4) a. **nie bžę**
PL bee
‘bees’
- b. **Nie ješ bžę**
PL EXST bee
‘There are bees.’
- c. ***Nie niho bžę**
PL EXST.NEG bee
‘There are bees.’

4.3 Nominal declension

4.3.1 Declension paradigms

dum ‘house’		
	SINGULAR	PLURAL
Unmarked	dum	duim
Agentive	dumâ	duimê
Accusative	duma	duime
Dative	dumoh	duimih
Ablative	dumosz	duimesz
Instrumental	dumu	duime
Locative	dumá	duimái
Partitive	dumev	duimev

kryszť ‘snake’		
	SINGULAR	PLURAL
Unmarked	kryszť	kreiszt
Agentive	kryszťê	kreisztê
Accusative	kryszte	kreiszte
Dative	kryszťih	kreisztih
Ablative	krysztesz	kreistesz
Instrumental	kryszťúi	kreiszte
Locative	kryszťái	kreisztái
Partitive	krysztev	kreisztev

4.3.2 Agentive case

4.3.3 Ablative case

The ablative case (glossed ABL) is fo

ABLATIVE OF MOVEMENT

ABLATIVE OF COMPARISON

(5) Markosz ezuitoizmét.

Marek-ABL COMP-ADJzheight1s

‘I am taller than Marek.’

4.4 Pronouns

PERSON	STRONG	WEAK	CLITIC
1s	dá	do	-em
2s	já	je	-esz
3s.ANIM	szá	sze	-ej
3s.INAN	ta	cej	-as
4GEN	jedá	dien	-uj
1PL.INC	chec	chce	-uh
1PL.EXC	kiec	kiec	-ak
2PL	lou	la	-elý
3PL.ANIM	dce	dcá	-ac
3PL.INAN	dcej	oce	-et

4.5 Interrogative pronouns

4.6 Numerals

Iridian has a vigesimal number system. Table 4.1 shows Iridian numerals from 1 to 20. Numbers from 1 to 10 are given their own name while numbers from 11 to 19 are formed by appending the numbers from one to nine to the clitic **-niem** with the preposition **sze** (with). The clitic **-niem** is derived from the word for number 10, **nau**, which itself comes from the Old Iridian **nagu*, ‘half.’

Table 4.1: Iridian numerals from 1 to 20.

NUMBER	IRIDIAN	NUMBER	IRIDIAN
1	on	11	onszeniem
2	mui	12	muiszeniem
3	hroná	13	hronaszeniem
4	dró	14	drószeniem
5	jed	15	jeceniem
6	vú	16	vúszeniem
7	szcsê	17	szcsêceniem
8	pesz	18	pêceniem
9	cam	19	camzeniem
10	nau	20	tydná

For numbers 11 to 19, the words are formed by appending the numbers from one to nine to the suffix *-niem* with the preposition *sze* (with).

Numbers from 21 to 99 are first expressed as multiples of 20. Thenceforth, the number system has largely become decimal, due primarily to the influence of surrounding Indo-European languages. Old Iridian, however, had a vigesimal system up to the number 8000.

Table 4.3 shows multiples of 10 from 30 to 100. The numbers are formed by the numeral followed by **tydná**. For bases that are not multiples of 20, the word **nau** ‘ten’ is added first, followed by the conjunction **sze** ‘with’.

Table 4.2: Iridian numerals from 30 to 100.

NUMBER	IRIDIAN	NUMBER	IRIDIAN
30	nauszetydná	70	nauszehronutydná
40	muitydná	80	drohutydná
50	nauszemuitydná	90	nauszedrohutydná
60	hronutydná	100	miesy

Iridian counting starts from the smallest component of the number to the largest. Each component can be simply appended with the conjunction **sze**. Only the numerals in Tables 4.1 and 4.3, and the first ten numbers after 100, 500, 1000, etc. appear as single words. Below are some illustrations:

- (6) a. **jecemiesy**
‘five with hundred’
105
- b. **cam sze drohutydná**
‘nine with four twenties’
89

Table 4.3: Iridian numerals from 200 to one billion.

NUMBER	IRIDIAN
200	moig
300, 400, etc.	hronumiesy, drohumiesy. etc.
1000	nitak
2000, 3000, etc.	muiniec, hronuniec, etc.
10.000	ohle
20.000, etc.	tydnuniec, etc.
100.000	dunie
200.000 etc	meguiniec, hronuniec, etc.
1.000.000	myliâ
1.000.000.000	myliâr
1.000.000.000.000	byliâ

4.6.1 Ordinal numbers

4.6.2 Fractions and decimals

4.6.3 Use of numerals

4.7 Derivational Morphology

4.7.1 -ou

The nominalizing suffix **-ou** is a non-productive affix used to form nouns from certain verbs.

4.7.2 -oušc

The suffix **-oušc** (pronounced as if written **-óšt** /o:ʃt/, or in some dialects as **-oušt** [ouʃt]) is used to form a noun indicating someone or something associated to a certain thing or performing a certain action.

Table 4.4: Nominal derivation using -ou

VERB ROOT			DERIVED NOUN	
milovaná	‘to learn’	→	milovanou	‘lesson’
palzá	‘to leave’	→	palzou	‘departure’
piaštá	‘to eat’	→	piaštou	‘food’
scená	‘to arrive’	→	scenou	‘arrival’
nieká	‘to open’	→	niekou	‘entrance’

Table 4.5: Nominal derivation using -oušc

VERB ROOT			DERIVED NOUN	
jorká	‘to travel’	→	jorkoušc	‘traveller’
možlá	‘to live’	→	možloušc	‘resident’
umielá	‘to get drunk’	→	umíloušc	‘drunkard’
virká	‘to write’	→	virkoušc	‘writer’
zdievá	‘to fool (sm.)’	→	zdívousc	‘swindler’
